Exercise E1 Analyzing a Scope Plot (written test, approx. 12 % of a 60-minute written test, SS2023) ..... 2

exam ee1 SS2023

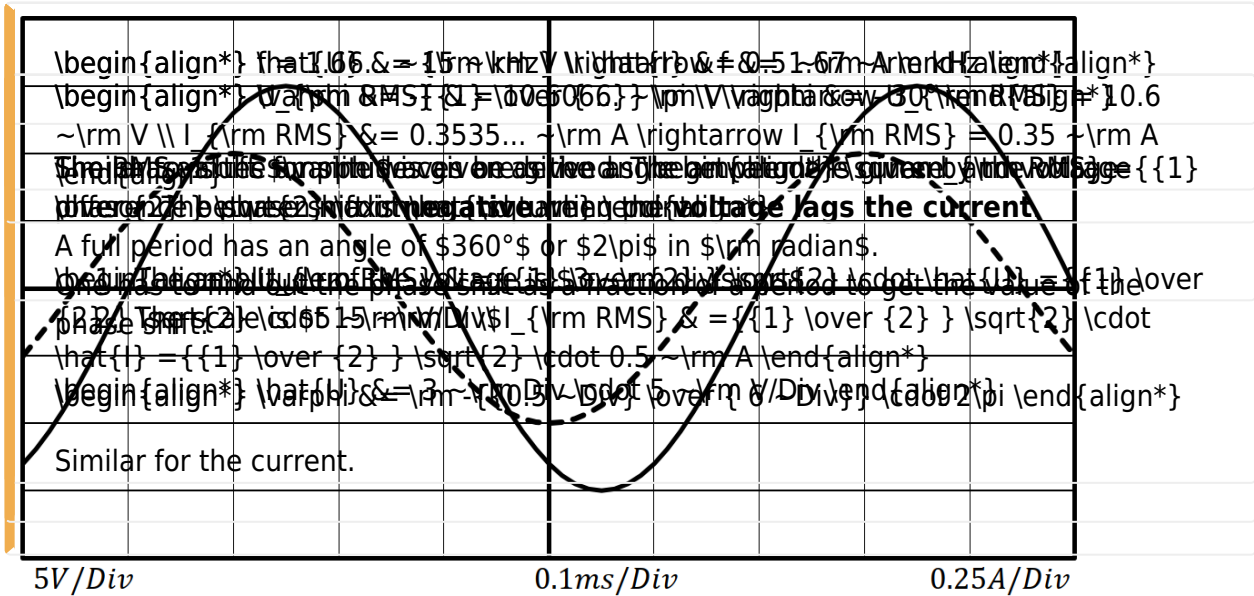

**Exercise E1 Analyzing a Scope Plot**  
 (written test, approx. 12 % of a 60-minute written test, SS2023)

Q. What is the phase shift (in degrees) between the two signals (and in radians and degree)?

Result: The measured current curve shall be visible as a dashed line.

**The continuous line shows the voltage.**

Solution

Use the correct symbols and units in your answers!

1. Calculate the frequency  $f$  of the periodic signals.

Solution

Frequency  $f$  is given by the period  $T$ . The period can be measured in the image of the scope.

1. The sine waves repeat after  $6 \sim \text{rm divisions}$  (e.g. from falling turning point to falling turning point of one curve)
2. The scale is  $0.1 \sim \text{rm ms/Div}$

$$f = \frac{1}{T} \quad \text{with } T = 6 \sim \text{rm Div} \cdot 0.1 \sim \text{ms/Div}$$

$$\rightarrow f = \frac{1}{6 \sim \text{rm Div} \cdot 0.1 \sim \text{ms/Div}}$$
