Exercise E1 Complex voltage dividers
(written test, approx. 16 % of a 60-minute written test, SS2023)

Task: Calculate the two impedances Z_1 and Z_2 in the circuit below resulting in a phase shift between impedance Z_1 and Z_2 of 45° . Choose an appropriate scaling factor and write it down.

- $R = 1.1 \text{ k}\Omega$

Solution: $L = 3.5 \text{ mH}$

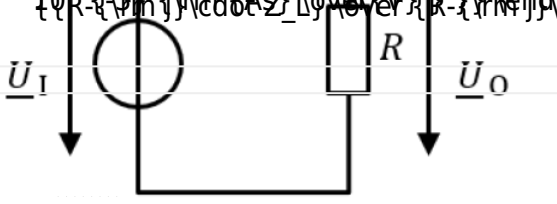

Result:

$$\underline{U}_I = 5 \text{ V}$$

$$\underline{Z}_1 = 50 \text{ k}\Omega$$

$$\underline{U}_O = 0.5 \text{ V} - j \cdot 1.5 \text{ V}$$

The cutoff frequency is the absolute value of the impedance \underline{Z}_L is equal to R . This leads to $\omega = \frac{1}{RC}$ or $f = \frac{1}{2\pi RC}$.
 $\omega = \frac{1}{1.1 \cdot 10^{-3} \cdot 3.5 \cdot 10^{-3}} = 260 \text{ kHz}$

.. Calculate the impedance \underline{Z}_L .

Solution

$$\underline{Z}_L = j \cdot \omega \cdot L = j \cdot 2\pi \cdot 150 \text{ kHz} \cdot 3.5 \text{ mH}$$
