Exercise E1 Electrostatics I

(written test, approx. 8 % of a 120-minute written test, SS2024)

2. Which value needs E_4 to have to get a resulting force of 0 N on q_0 ?

Path: $q_0 = -1 \text{ nC}$

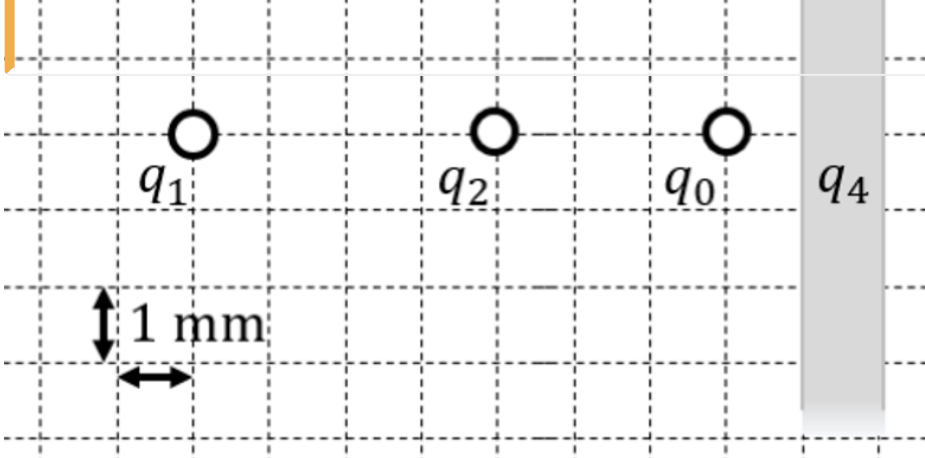

- $q_1 = -5 \text{ nC}$

Path: $E_4 = 907 \text{ (from 100 N/C)}$

- $\vec{F}_{01} = \left(\begin{array}{c} 917 \\ 0 \\ 0 \end{array} \right) \cdot 10^{-6} \text{ N}$

In the x -direction, the force components are $F_{01,x}$. We can calculate the magnitude of the force F_{01} by the position $r_{01} = 8.954 \cdot 10^{-12} \text{ m}$. The force F_{01} is $F_{01} = \frac{1}{4\pi\epsilon_0} \cdot \frac{q_1 \cdot q_0}{r_{01}^2}$. Here, the field has to compensate the force \vec{F}_{01} from q_1 on q_0 .

$$|\vec{F}_{01}| = |E_4| \cdot |q_0| \rightarrow E_4 = \frac{|\vec{F}_{01}|}{|q_0|} = \frac{917 \cdot 10^{-6} \text{ N}}{1 \cdot 10^{-9} \text{ C}} = 917 \cdot 10^3 \frac{\text{V}}{\text{m}} = 917 \cdot 10^3 \frac{\text{V}}{\text{m}}$$

1. Calculate the single forces \vec{F}_{01} , \vec{F}_{02} , \vec{F}_{03} , on the charge q_0 !

Path

First, calculate the magnitude of the forces, like \vec{F}_{01} .
 The force \vec{F}_{01} is purely on the x -axis and therefore equal to $F_{01,x}$.

$$\vec{F}_{01} = F_{01,x} = \frac{1}{4\pi\epsilon_0} \cdot \frac{q_1 \cdot q_0}{r_{01}^2} = \frac{1}{4\pi \cdot 8.854 \cdot 10^{-12} \text{ As/Vm}} \cdot \frac{1 \cdot 10^{-9} \text{ C} \cdot 5 \cdot 10^{-9} \text{ C}}{(7 \cdot 10^{-3} \text{ m})^2} =$$

$$917. \cdot 10^{-6} \frac{\text{As}^2 \cdot V_m}{\text{As} \cdot m^2} =$$

$$917. \cdot 10^{-6} \frac{VAs}{m} = 917. \cdot 10^{-6} \frac{Ws}{m} \quad \&= 917. \cdot 10^{-6} \mu N \quad \text{(to the right)}$$

Similarly, we get for \vec{F}_{02} and \vec{F}_{03}

$$\vec{F}_{02} = F_{02,x} \quad \&= -1997. \cdot 10^{-6} \mu N \quad \text{(to the right)}$$

$$\vec{F}_{03} = F_{03,y} \quad \&= -1123. \cdot 10^{-6} \mu N \quad \text{(to the top)}$$
