Exercise E1 Resistance of a Wire by Resistivity (written test, approx. 4 % of a 120-minute written test, SS2021) ..... 2

## magnetostatic, field lines, exam ee2 SS2021

**Exercise E1 Resistance of a Wire by Resistivity  
(written test, approx. 4 % of a 120-minute written test, SS2021)**

Several parallel conductors are projecting out of the plane.

The same current  $I$  flows through all the conductors in different directions (see image below).

Sketch at least 10 field lines of the magnetic field strength  $\vec{H}$  in such a way that the different properties of the field lines (e.g. direction and density) can be seen.

**Result**

- high density of field lines near the conductors
- direction of the field lines given by the right-hand rule
- magnetic field has closed field lines
- resulting field given by superposition of field lines
