Exercise E17 Magnetic Circuit

(written test, approx. 10 % of a 120-minute written test, SS2024)

2. Calculate the real power, the apparent power, and the reactive power of the 400 V / 50 Hz three-phase power net. Each single string has a resistor $R=5 \text{ } \Omega$ and an inductance of $L=10 \text{ mH}$.

Path

$|Z_{RL}| = 5.90 \text{ } \Omega$
 $R = 5 \text{ } \Omega$
 $L = 10 \text{ mH}$
 $f = 50 \text{ Hz}$
 $U_s = 230 \text{ V}$
 $I_s = 36.73 \text{ A}$
 $S = 26.898 \text{ kVA}$
 $P = 22.775 \text{ kW}$
 $Q = 14.310 \text{ kVAr}$

The active power is $P = S \cdot \cos \varphi = 26.898 \dots \cdot 0.84673 \dots = 22.775 \dots \text{ kW}$
 The apparent power is $S = 26.898 \text{ kVA}$
 The reactive power is $Q = \sqrt{S^2 - P^2} = \sqrt{(26.898 \dots \text{ kVA})^2 - (22.775 \dots \text{ kW})^2} = 14.310 \dots \text{ kVAr}$

1. Calculate the $\cos \varphi$, and the magnitude of the impedance $|Z|$ for a single string.

Path

The phase φ is given by: $\varphi = \arctan \left(\frac{X_L}{R} \right) = \arctan \left(\frac{2\pi \cdot f \cdot L}{R} \right) = \arctan \left(\frac{2\pi \cdot 50 \text{ Hz} \cdot 10 \cdot 10^{-3} \text{ H}}{5 \text{ } \Omega} \right) = 0.5609 \dots \hat{=} +32^\circ$

With this, the $\cos \varphi$ becomes $\cos \varphi = \cos(0.5609 \dots) = 0.84673 \dots$

The impedance is given by: $|Z_{RL}| = \sqrt{X_L^2 + R^2} = \sqrt{(2\pi \cdot f \cdot L)^2 + R^2} = \sqrt{(2\pi \cdot 50 \text{ Hz} \cdot 10 \cdot 10^{-3} \text{ H})^2 + (5 \text{ } \Omega)^2} = 5.905 \dots \text{ } \Omega$
