Exercise E1 Electrostatics I

(written test, approx. 10 % of a 120-minute written test, SS2022)

2. What has been given to you? The charges are $q_1 = 1 \text{ nC}$, $q_2 = 1 \text{ nC}$, $q_0 = 1 \text{ nC}$, $q_4 = 1 \text{ nC}$. The value of the point charge q_0 is 1 nC . Which value needs E_4 to have to get a resulting force of 0 N on q_0 ?

Path: $q_0 = 1 \text{ nC}$

- $q_1 = 2 \text{ nC}$

Path: $E_4 = 2310.97 \text{ (nN/m)}$

- $\vec{F}_{01} = \left(\begin{array}{c} 19.97 \\ 0 \\ 0 \end{array} \right) \text{ (nN)}$

In the x -direction, the force components are $F_{01,x} = 19.97 \text{ nN}$. The permittivity is $\epsilon_0 = 8.854 \cdot 10^{-12} \text{ As/Vm}$.

$$|\vec{F}_{01}| = \sqrt{\left(\sum_i F_{i,x} \right)^2 + \left(\sum_i F_{i,y} \right)^2} = \sqrt{19.97^2 + 0^2} = 19.97 \text{ nN}$$

Here, this force is $F_{01} = 19.97 \text{ nN}$.

$$|\vec{F}_{04}| = \sqrt{\left(\sum_i F_{i,x} \right)^2 + \left(\sum_i F_{i,y} \right)^2} = \sqrt{0^2 + 19.97^2} = 19.97 \text{ nN}$$

$$|\vec{F}_{04}| = |E_4| \cdot |q_0| \Rightarrow E_4 = \frac{|\vec{F}_{04}|}{|q_0|} = \frac{19.97 \text{ nN}}{1 \text{ nC}} = 19.97 \text{ nV/m}$$

$$E_4 = 19.97 \cdot 10^{-9} \text{ N/C} = 19.97 \cdot 10^{-9} \text{ V/m}$$

$$E_4 = 19.97 \cdot 10^{-9} \text{ V/m}$$

$$E_4 = 19.97 \cdot 10^{-9} \text{ V/m}$$

$$E_4 = 19.97 \cdot 10^{-9} \text{ V/m}$$

$$E_4 = 19.97 \cdot 10^{-9} \text{ V/m}$$

1. Calculate the single forces \vec{F}_{01} , \vec{F}_{02} , \vec{F}_{03} , on the charge q_0 !

Path

First, calculate the magnitude of the forces, like \vec{F}_{01} .

The force \vec{F}_{01} is purely on the x -axis and therefore equal to

$$F_{01,x} = \frac{1}{4\pi\epsilon_0} \cdot \frac{q_1 \cdot q_0}{r_{01}^2} = \frac{1}{4\pi \cdot 8.854 \cdot 10^{-12}} \cdot \frac{1 \cdot 1}{(1 \cdot 10^{-2})^2} = 19.97 \text{ nN}$$

$$F_{01,x} = 19.97 \text{ nN}$$

$$F_{01,x} = 19.97 \text{ nN}$$

$$F_{01,x} = 19.97 \text{ nN}$$

$$F_{01,x} = 19.97 \text{ nN}$$

$\cdot 10^{-6} \left\{ \frac{V_A}{m} \right\} = 19.97... \cdot 10^{-6} \left\{ \frac{W_s}{m} \right\} \quad \&= 19.97... \left\{ \frac{\mu N}{m} \right\} \quad \text{(to the right)}$

Similarly, we get for \vec{F}_{02} and \vec{F}_{03}

$$\vec{F}_{02} = F_{02,x} \quad \&= -28.09... \left\{ \frac{\mu N}{m} \right\} \quad \text{(to the right)}$$

$$\vec{F}_{03} \quad \&= -22.47... \left\{ \frac{\mu N}{m} \right\} \quad \text{(to the top left)}$$

For \vec{F}_{03} , we have to calculate the x - and y -component.

This is possible, by using the angle α between the line through q_0 and q_3 and the positive x -axis (pointing to the right).

So, α has to be between 90° and 180° . It can be calculated by:

$$\alpha = \arctan\left(\frac{-4 \text{ cm}}{+2 \text{ cm}}\right) = \pi - 1.1071... = 180^\circ - 63.4...^\circ = 116.6...^\circ$$

Based on this, the x - and y -component is:

$$F_{03,x} \quad \&= |\vec{F}_{03}| \cdot \cos \alpha = 10.05... \left\{ \frac{\mu N}{m} \right\} \quad \text{(to the left)}$$

$$F_{03,y} \quad \&= |\vec{F}_{03}| \cdot \sin \alpha = 20.10... \left\{ \frac{\mu N}{m} \right\} \quad \text{(to the top)}$$
