Task 1.2.1 Multiple Forces on a Charge I (exam task, ca 8% of a 60 minute exam, WS2020)

Given is the arrangement of electric charges in the picture on the right.

The following force effects result:

$$F_{01} = -5 \text{ N}$$

$$F_{02} = -6 \text{ N}$$

$$F_{03} = +3 \text{ N}$$

Calculate the magnitude of the resulting force.

Tips for the Solution

- How have the forces be prepared, in order to add them correctly?

Solution

$$\begin{aligned} \vec{F}_0 &= |\vec{F}_0| \quad \text{with } \vec{F}_0 = \left(\begin{matrix} F_{x,0} \\ F_{y,0} \end{matrix} \right) = \left(\sum \limits_n F_{x,0n} \quad \sum \limits_n F_{y,0n} \right) \\ F_0 &= \sqrt{\left(\sum \limits_n F_{x,0n} \right)^2 + \left(\sum \limits_n F_{y,0n} \right)^2} \end{aligned}$$

The forces have to be resolved into coordinates. Here, it is recommended to use an orthogonal coordinate system (x and y).

The coordinate system shall be in such a way, that the origin lays in Q_0 , the x -axis is directed towards Q_3 and the y -axis is orthogonal to it.

For the resolution of the coordinates it is necessary to get the angles α_{0n} of the forces with respect to the x -axis.

In the chosen coordinate system this leads to: $\alpha_{0n} = \text{atan}\left(\frac{\Delta y}{\Delta x}\right)$

$$\alpha_{01} = \text{atan}\left(\frac{3}{1}\right) = 1.249 = 71.6^\circ$$

$$\alpha_{02} = \arctan\left(\frac{4}{3}\right) = 0.927 = 53.1^\circ$$

$$\alpha_{03} = \arctan\left(\frac{0}{3}\right) = 0 = 0^\circ$$

Consequently, the resolved forces are:

$$\begin{aligned} F_{x,0} &= F_{x,01} + F_{x,02} + F_{x,03} && \text{mit } F_{x,0n} \\ &= F_{0n} \cdot \sin(\alpha_{0n}) && F_{x,0} = (-5 \text{ N}) \cdot \sin(71.6^\circ) + (-6 \text{ N}) \cdot \sin(53.1^\circ) + (+3 \text{ N}) \cdot \sin(0^\circ) \\ & && F_{x,0} = -2.18 \text{ N} \\ F_{y,0} &= F_{y,01} + F_{y,02} + F_{y,03} && \text{mit } F_{y,0n} = F_{0n} \cdot \cos(\alpha_{0n}) \\ & && F_{y,0} = (-5 \text{ N}) \cdot \cos(71.6^\circ) + (-6 \text{ N}) \cdot \cos(53.1^\circ) + (+3 \text{ N}) \cdot \cos(0^\circ) \\ & && F_{y,0} = -9.54 \text{ N} \end{aligned}$$

Result

$$F_0 = \sqrt{(-2.18 \text{ N})^2 + (-9.54 \text{ N})^2} = 9.79 \text{ N} \rightarrow 9.8 \text{ N}$$
