Inverting Operational Amplifier

Gain of Op-Amp

Build the following circuit in [figure 1](#) with the power supply and a multimeter.

Fig. 1: Inverting Op-Amp

$U_{DD} = 10\text{ V}$, $U_{SS} = -10\text{ V}$, $R_1 = 10\text{ k}\Omega$

Calculate the necessary value for R_2 , so that the Output U_{OUT} is +5 V. Use the supply voltage of the operational amplifier for U_{IN} .

$U_{IN} =$

R_2

Investigation of inverting input

Fig. 2: Inverting Op-Amp: Investigate inverting input

$U_{DD} = 10V, U_{SS} = -10V, R_1 = 10\Omega$

For U_{IN}, U_{OUT}, R_2 use the values from [figure 1](#).

Complete the arrows in the schematic of the circuit.

Determine the the currents I_1 and I_2 indirectly through a voltage measurement.

Calculate the sum of the currents at node N_{12} .

$I_{\text{1}} \approx I_{\text{2}}$

$I_{\text{2}} \approx I_{\text{3}}$

$I_{\text{Sigma N12}} \approx I_{\text{3}}$
