Non-inverting Operational Amplifier

Op-Amp as current source

An Op-Amp can not only amplify currents and voltages, it can also act itself as current source. Here is an scematic of an typical current source using an Op-Amp:

Fig. 1: Non-inverting Op-Amp: current source

$U_{\text{DD}} = 10\text{V}$, $U_{\text{SS}} = -10\text{V}$, $R_1 = 100\text{k}\Omega$, $R_2 = 10\text{k}\Omega$, $R_3 = 100\Omega$

Measure the values given in the table below.

Potentiometer	U_{R2}	U_{R3}	I_{OUT}	U_{OUT}	I_{OUT}	U_{OUT}	I_{OUT}	U_{OUT}
0%								
50%		...						

Tab. 1: Op-Amp as current source: measured and calculated values
